# Press Release

## **SMT 88 UL High Reliability, Reworkable Underfill**

(Albany, NY) **January 13, 2016** – YINCAE Advanced Materials, LLC is pleased to announced the availability of the SMT 88 UL. SMT 88 UL is a novel and groundbreaking underfill.

Advantages of the SMT 88 UL include unnecessary heating, room temperature underfill, high reliability, and compatibility with flux residues. Without heating, it can be underfilled into 10 $\mu$  gap at room temperature, where normal underfill cannot flow into microgap. Furthermore, traditional underfills are sprayed and can cause contamination problem. SMT 88 UL can successfully remove these problems and flow into microgap easily.

SMT 88 UL is a very ubiquitous underfill. It can be used anywhere – wafer-level (CSP), package-level, and board-level (LGA, BGA, and QFN) to name a few.

Additional information on the SMT 88 UL is available by contacting YINCAE at [info@yincae.com](mailto:info@yincae.com).
